

World's Largest Visitor Management Platform

100+ Million Check-ins Annually

We adapt our solutions to your needs.

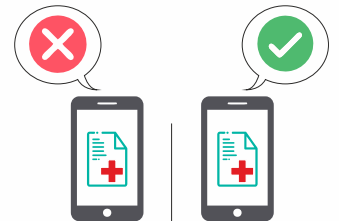

The world has transitioned to a new normal. In recognition of this transition, IMRON Corporation is using their platform to foster workplaces that are Safe, Secure and Efficient. The way an individual enters the workplace is something we have worked hard at perfecting. Foremost to this objective is the privacy of the visitors, the health of everyone involved, and the time it takes to navigate the building's spaces. We take pride in ensuring that every aspect of "people flow" in a building is fluid and centered around safety.

Visitor uses smartphone to scan static QR code provided at desk/kiosk.

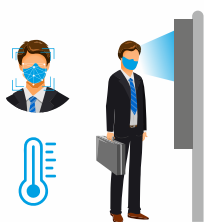

Visitors receive a link to choose the host and HSQ. Visitor completes form and submits it.

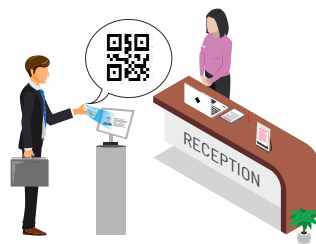

If HSQ is failed, visitor's entry is denied. Host is then notified.

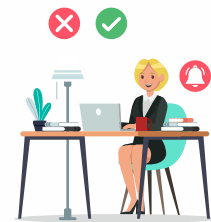

If HSQ is passed, host is then notified.

Device scans the QR code, snaps a photograph, and scans for temperature/mask compliance.

If approved, visitor scans the driving license/national ID at reception. Receives a QR code.

Host approves or rejects request. Visitor gets text/email of their decision.

If visitor fails a scan, they receive a denial message and the host is notified via email.

Once visitor passes all scans, permission granted to access the premises through access control device.

Features

- On-Premises & Cloud Capabilities
- Integrates with Text & Email
